

ERP Integration

Take control of global payments, your way.

ascendant®

At Ascendant, we know that every business is different. That's why we make it easy to connect your ERP or accounting system—no matter what you use, no matter your size.

Flexible Integration Options

- **API Integration:** Robust APIs are available to connect Ascendant directly into your ERP or in-house platform. This enables fully automated payment workflows, real-time data exchange, and full control—ideal for clients with IT resources or complex needs.
- **Secure File Upload:** Prefer something simple? Just export payment files from your ERP and upload them to aPay. We support all standard file formats and can quickly configure custom mapping, so you're never stuck with manual rekeying.
- **SFTP (Secure File Transfer Protocol):** Secure SFTP connections are available to automate scheduled file transfers between your systems and ours. Payments flow without you lifting a finger—batch processing made effortless.
- **White Label & SSO (Single Sign-On):** Need to give your team or your customers branded access? We support white-labeling and SSO, so everything works under your own banner, with your controls.
- **No IT Headaches:** Integration can be as hands-on or as hands-off as you need. Many clients are up and running in a few weeks, not months.
- **Secure, Compliant, and Turnkey Data Handling:** We securely handle all banking data, validate formats for every country/currency, and keep clients fully compliant. Data doesn't have to be stored in finance email inboxes or spreadsheets.

No matter which method you choose, you'll never have to rekey information or enter payment data twice.

Your team simply uses the system they already know. Payment details flow directly from your ERP to Ascendant's aPay platform, saving hours of manual work, eliminating mistakes, and reducing accounting headaches. Your data's security matters. Every connection is protected with industry leading encryption and full regulatory compliance. Sensitive ERP and payment information stays private and secure, so you can integrate with total peace of mind.

What Makes Us Different?

- **Integration Without Disruption**
  All development, mapping, and support is done in-house by our expert team. We handle the complexity so you don't have to.

- **All-In-One Platform**
  Our aPay platform is ERP-agnostic. Whether you use SAP, Oracle, NetSuite, Microsoft Dynamics, Sage, or even a home-grown system, we fit right in. No need to replace what's already working.

- **Expert Support**
  You'll work directly with our onboarding team, not a call center. We handle everything in-house, so you get a true partner and a dedicated account manager—not just a platform.

> "The Ascendant integration was so easy, I wish we'd done it sooner. We never have to re-enter payment data or chase down errors. Our team just uploads the file and it's handled. It's taken hours off our workload every month."
